

# HOW TO CALCULATE QUANTITY OF WALLPAPER ROLLS

- 1 Measure the **LENGTH** and **HEIGHT** of your wall in inches

Sample room is 144 inches in length and 96 inches in height

- 2 Divide the **LENGTH** by 25.5.

$$\underbrace{144}_{\text{ROOM LENGTH}} / \underbrace{25.5}_{\text{ROLL WIDTH*}} = \underline{5.647}$$

- 3 **ROUND UP** to the nearest whole number

$$5.647 \longrightarrow \underline{6}$$

This is how many rolls you will need

The sample room will receive 6 rolls of wallpaper at 26" W x 102" L \*\*

- 4 Repeat this process for any additional wall

\* This value is the roll width of 26 inches, minus the 0.5 inches of overlap between rolls

\*\* Roll length is 102 inches, made to accommodate standard 96 inch (8 foot) ceilings. Any excess can be trimmed off after installation. For custom sizing, please contact us.
